

## Kinetico Twin Tank K2030s Softener

### Benefits of the Kinetico Non-Electric Design:

- Non-Electric operation. No timers or computers to set, adjust, repair, or replace. The patented design allows the unit to regenerate using hydraulic pressure, eliminating the need for electric controls
- Fully automatic operation

### Benefits of the Metered Twin Tank Design:

- Enables the unit to regenerate one tank the moment it runs out of capacity, automatically switching service over to the other tank on standby
- Since one tank is always online, it provides an uninterrupted supply of treated water 24 hours a day
- Eliminates the need for a reserve capacity which results in the highest efficiency possible. This is a true demand system. Single tank softeners that are metered are only a semi-demand system because they rely on inefficient reserve capacities
- The unit uses treated water from one tank to regenerate the other. This results in maximum service life. This is particularly beneficial for water with high iron and manganese levels
- Corrosion resistant valve and tanks
- Outstanding transferrable Warranty

#### Independent Laboratory Certification

Kinetico Water Softeners are Tested and Certified by WQA against NSF/ANSI 44, NSF/ANSI 372, and CSA Standard B483.1 for specific performance claims as verified and substantiated by test data.
